100 USDA, Suite 206
Stillwater, Oklahoma 74074-2651

File code: 390-11

The Watershed Boundary Dataset (WBD) for the State of Oklahoma has been reviewed and Provisionally Certified. The WBD delineations, associated 12-digit hydrologic unit codes, and metadata meet the criteria as stated in Federal Standards for Delineation of Hydrologic Unit Boundaries, version 2. The dataset will be marked as provisional and archived at the USDA-NRCS National Cartography and Geospatial Center. Data can be downloaded from the USDA Natural Resources Data Gateway via http://data.nrcs.usda.gov.

Final Certification is to be granted upon edge matching with adjacent states assuring that all completed data contribute to a consistent national WBD of 12-digit hydrologic units, one of several national datasets collected cooperatively under the auspices of the Federal Geographic Data Committee (FGDC).

States are encouraged to work with neighboring states to resolve boundary issues and resubmit the data to attain Final Certification. You will receive notice of final certification once the data are edge matched across state lines with agreed upon hydrologic unit codes and associated metadata.
